Passionate Sitecore Developer (m/f)

About us

We are a bunch of passionate developers, designers, miracle workers, and transformers who have one mission: Build METRO's Multi-Channel wholesale business of the future. Using the newest technologies, we provide solutions for a multi data center and high availability environment. We are driving the evolution of the digital communication platform that will be seen by more than 15 million visitors per month.

Joining our team means working in a startup-like atmosphere while being part of an international market-leading specialist in wholesale and food retail. Indeed, METRO operates in 35 countries and employs more than 150,000 people worldwide serving more than 21 million customers. In the financial year 2015/16, METRO generated sales of around €37 billion. Moreover, we are an equal opportunity employer. We offer all qualified employees and applicants identical chances.

What you can expect

- An agile development environment with pair programming and code reviews.
- You are involved in all phases of software engineering, from conception over implementation to testing and delivery.
- A strong focus on collaboration, people, and self organization.
- An international work environment with colleagues from all over the world.
- You work in small independent teams to develop customer-oriented services and applications.
- A flexible use of innovative technologies.
- A constant exchange of knowledge within your team and other members of the organization.
- Freedom for own ideas and a "never stop" learning culture.

Your profile

- You have comprehensive experience in developing CMS based web applications (ideally with Sitecore).
- You have profound development knowledge of the C# .NET technology stack.
- You are familiar with REST, JSON, HTML, CSS, CSS Frameworks like Bootstrap, and JavaScript.
- Ideally you have experience with Sitecore 8.x, TDS, SOLR, Sitecore Rocks, Unit Testing, and Front-End Testing.
- You are eager to constantly learn new technologies.
- You have enthusiasm for automating and automatically scaling tests and deployments.
- You are already developing software "full stack" meaning from the front end over the back end to the persistence layer or you want to learn how to do it.
- You have fun solving complex problems and you want to work in a team that shares this ambition with you.
- You have experience with agile development methodologies.
